

(A) Nucleotide diversity ratio (CK/W5) across chromosome 5. The CDI region is highlighted in gray.
 (B) Detailed view of π ratio within the CDI region (19.75–20.35 Mb). The red dashed line indicates ABC1K7.

Figure S1 Genome-wide selection scan identifies the CDI region on chromosome 5.

(C) Fst ratio within the CDI region (19.75–20.35 Mb). The red dashed line indicates ABC1K7.
 (D) CDI region ROH coverage in three coconut varieties. Numbers indicate samples with CDI-overlapping ROH segments.
